Galaxy And Mass Assembly (GAMA): The galaxy stellar mass ...

Galaxy formation theory must explain the preferred mass for star formation efficiency, the shallow low-mass end slope compared to the halo mass function, and the exponential cutoff at high masses (Oppenheimer et al 2010) At high masses, feedback from active galactic nuclei has been invoked to prevent cooling of

Cosmic Feedback from Supermassive Black Holes

Feedback and galaxy formation Every massive galaxy appears to have a massive black hole at its center whose mass is about 0.2% of the mass of the galaxy's bulge (Tremaine et al 2002) It is now widely considered that the black hole may have brought about this correlation by regulating the amount of gas available for star formation in the galaxy
