### Spice and Little Sugar

Having a little sister isn't always a picnic. Older sisters may feel jealous of the time taken away from them, the toys they have to share, and the attention focused on the youngest member of their family. Getting along is often a day-to-day battle, but what can parents do to make this situation easier and to help children realize how special it is to have a sister? In *Spice & Little Sugar*, the delightful new children's book about sibling rivalry, authors Megan Waldrep and Melissa Nelson show big sisters the big benefits, responsibilities, and absolute joys of their role. Told in a whimsical rhyme that children will love to read aloud, *Spice & Little Sugar* first humorously relates all the ways Little Sugar gets on Spice's nerves, from grabbing her favorite toys to sticking to her like glue when Spice wants to be left alone. But gradually Spice comes to realize that Little Sugar does have her good points, including sticking up for her when she gets in trouble with their parents and saving the day with her cute face. Parents will love the warm, gentle lessons the book teaches about understanding how positives can outweigh negatives, and kids will laugh at the playful illustrations and funny story. The perfect book for siblings, *Spice & Little Sugar* can be read and enjoyed by the whole family, time and time again.

### You're It

Welcome to the biggest, fastest, deadliest science book you'll ever read. The world's largest land mammal could help us end cancer. The fastest bird is showing us how to solve a century-old engineering mystery. The oldest tree is giving us insights into climate change. The loudest whale is offering clues about the impact of solar storms. For a long time, scientists ignored superlative life forms as outliers. Increasingly, though, researchers are coming to see great value in studying plants and animals that exist on the outermost edges of the bell curve. As it turns out, there's a lot of value in paying close attention to the "oddballs" nature has to offer. Go for a swim with a ghost shark, the slowest-evolving creature known to humankind, which is teaching us new ways to think about immunity. Get to know the axolotl, which has the longest-known genome and may hold the secret to cellular regeneration. Learn about Monorhaphis chuni, the oldest discovered animal, which is providing insights into the connection between our terrestrial and aquatic worlds. Superlative is the story of extreme evolution, and what we can learn from it about ourselves, our planet, and the cosmos. It's a tale of crazy-fast cheetahs and super-strong beetles, of microbacteria and enormous plants, of whip-smart dolphins and killer snakes. This book will inspire you to change the way you think about the world and your relationship to everything in it.

### How to Draw Cute Stuff

After the mysterious disappearance of her parents, eight-year-old Hadley Meadows was left behind in a building the world didn't know about. However, this building had groundbreaking

technology within that gave Hadley a chance to do almost anything. Hadley would inherit the DimensionCast, a revolutionary pod shaped supercomputer that puts her in a sleep like state, then with the aid of her brain, constructs a virtual world she can inhabit and manipulate at her own will. This virtual reality, called the Pseudoplex, became her digital cosmos that housed all of the content she would go on to create. Hadley spent so much time in the Pseudoplex that she no longer identified with the outside world. Using her ever refining creative abilities, she constructed a virtual body for herself to manifest. She called it her avatar, and used it to substitute her own identity within the Pseudoplex. She named her avatar Animi, leaving behind her birth name for the real world. Hadley was an isolated daughter of missing parents, but when she laid in her DimensionCast and entered the Pseudoplex as Animi, she became a creator. She built cities, mountain ranges, forests, and towns in her Pseudoplex, and eventually filled those places with artificial intelligence that resembled other people. Animi called these people NPCs, and their artificial intelligence became more advanced, further immersing Animi into the world that she had built. Years later, Animi and her NPCs had put together an entire planet within the Pseudoplex that they could coexist on. This virtual planet was named Swisaril, and it would develop an economy, politics, laws, cultures, and celebrities. Now, Hadley is twenty-six, and she still feels like something is missing. She could still sense the twinge of loneliness in her head, even though she was the creator of an entire cyber planet. She desired something new and exciting that was random; an unknown variable to bring a new perspective to Swisaril. With plenty of research, she found a twenty-four-year-old potential filled but talent squandered man by the name of Milo Hodge. Hadley saw Milo's capacity to do great things, but knew he would never reach that capability under his current circumstances. So, she used her resources to track Milo down and bring him into her digital world. It didn't take long for Milo to hop into the Pseudoplex once Hadley introduced him to his very own DimensionCast. Milo was assigned an avatar, which he named Creo, and just like Hadley, took that as his identity as long as he was in the Pseudoplex. Animi makes it clear that she wants Creo to become a creator just like her, and use his potential to build off her already great creation. As Creo grows alongside Animi, he will learn about her past as the answers slowly trickle into view. With this planet full of values, civilizations, and surprises, there are many lessons that both Animi and Creo must learn together. The Pseudoplex is where minds and machines merge, where evolution is digital, and where imagination becomes reality. Step inside and synchronize.
