The dramatic story of one man's recovery offers new hope to those suffering from concussions and other brain traumas In 1999, Clark Elliott suffered a concussion when his car was rear-ended. Overnight his life changed from that of a rising professor with a research career in artificial intelligence to a humbled man struggling to get through a single day. At times he couldn't walk across a room, or even name his five children. Doctors told him he would never fully recover. After eight years, the cognitive demands of his job, and of being a single parent, finally became more than he could manage. As a result of one final effort to recover, he crossed paths with two brilliant Chicago-area research-clinicians—one an optometrist emphasizing neurodevelopmental techniques, the other a cognitive psychologist—working on the leading edge of brain plasticity. Within weeks the ghost of who he had been started to re-emerge. Remarkably, Elliott kept detailed notes throughout his experience, from the moment of impact to the final stages of his recovery, astounding documentation that is the basis of this fascinating book. The co-host of TLC's hit series, *Freaky Eaters*, reveals the ultimate diet plan to kick the junk-food habit in just four weeks- without the pain of withdrawal. In March 2010, The Scripps Research Institute released a study showing how rats on a junk-food diet had just as difficult a time-if not more so-giving up excess fat and sugar as the rats who were struggling to recover from cocaine dependence. The results showed that certain foods actually alter the brain's chemistry, making our consumption of these foods less like an indulgence and more like an addiction. Our brains require two key neurotransmitters to maintain proper mood and function, serotonin and dopamine. We get a rush of the two when we eat junk food, but the converse is also true: If we stop eating them cold turkey, we go through serotonin and dopamine withdrawal. This is what causes so many dieters to ultimately fail. In order to successfully lose weight, explains Dr. Mike Dow, dieters should be sensitive both to their emotional and physical needs. Dr. Dow, a psychologist who specializes in addictive behavior and eating disorders, introduces a four-week

program for breaking the hold that food has over the body, mind, and spirit by gradually decreasing the amount of "bad" foods while increasing activities and foods that boost serotonin and dopamine levels. Among Americans, diabetes is more prevalent today than ever; obesity is at epidemic proportions; nearly 10% of children are thought to have nonalcoholic fatty liver disease. And sugar is at the root of these, and other, critical society-wide, health-related problems. With his signature command of both science and straight talk, Gary Taubes delves into Americans' history with sugar: its uses as a preservative, as an additive in cigarettes, the contemporary overuse of high-fructose corn syrup. He explains what research has shown about our addiction to sweets. He clarifies the arguments against sugar, corrects misconceptions about the relationship between sugar and weight loss; and provides the perspective necessary to make informed decisions about sugar as individuals and as a society.

metabolism from a dependence on sugar to running on healthy fats. As Gedgaudas reveals, numerous studies in recent years refute the long-promoted anti-saturated fat and anti-cholesterol agenda. Reclaim Your Brain

This is a Summary of Dr. Mike Dow's *The Brain Fog Fix: Reclaim Your Focus, Memory, and Joy in Just 3 Weeks*. Is stress preventing you from enjoying your daily life? Do you find that you're becoming more distracted or forgetful? Are "the blues" sapping your spirits? Or do you simply feel not quite like yourself? If you want to reclaim your focus, memory, and joy, you're not alone. There are millions of people fighting against the epidemic of brain fog that's sweeping the nation. The good news: It's not an irreparable condition; rather it's a side effect of modern-day living. Many of the foods we eat and the habits we have do not support our brains. We no longer get what we need in order to produce essential brain chemicals that keep us energized, calm, focused, optimistic, and inspired. And even worse, our choices could lead to long-term problems, like dementia, Alzheimer's disease, depression, and anxiety. Sadly, if you look at the way most of us live, it seems almost as though we've chosen a lifestyle deliberately

intended to undermine our brain chemistry and our health. Fortunately, there is a solution. The Brain Fog Fix is an easy-to-follow three-week program designed to help naturally restore three of your brain's most crucial hormones: serotonin, dopamine, and cortisol. Rebalancing these chemicals will in turn enable the rest of your brain's chemistry to reach optimal levels. Each week of the program focuses on a different element of your life: In week 1, you'll improve your mood by modifying your diet and using cognitive strategies to overcome pitfall thought patterns. In week 2, you'll increase your energy by focusing on sleep, exercise, and memory-boosting games. In week 3, you'll enhance your spirit through practices that help you connect to something larger than yourself and enable you to rediscover your joy in life. By the end of this simple program, you'll be thinking more clearly, remembering more accurately, learning more quickly, and unleashing the floodgates of your creativity. And you'll simply feel better-for now and in the long term. Available in a variety of formats, this summary is aimed for those who want to capture the gist of the book but don't have the current time to devour all 304 pages. You get the main summary along with all of the benefits and lessons the actual book has to offer. This summary is not intended to be used without reference to the original book.

Enchantment. By Dr. Sharon Blackie's definition, a vivid sense of belongingness to a rich and many-layered world, a profound and whole-hearted participation in the adventure of life. Enchantment is a natural, spontaneous human tendency – one we possess as children, but lose, through social and cultural pressures, as we grow older. It is an attitude of mind which can be cultivated: the enchanted life is possible for anyone. It is intuitive, embraces wonder, and fully engages the mythic imagination – but it is also deeply embodied in ecology, grounded in place and community. Taking as her starting point the inspiration and wisdom that can be derived from myth, fairytales, and folk culture, Dr. Sharon Blackie offers a set of practical and grounded tools for enchanting our lives and the places we live, so leading to a greater sense of meaning and of belonging to the world. Michael S. Gazzaniga, one of the most important neuroscientists of the twentieth century, gives us an exciting behind-the-scenes look at his seminal work on that unlikely couple, the right and left brain. Foreword by Steven Pinker. In the mid-twentieth century, Michael S. Gazzaniga, "the father of cognitive neuroscience," was part of a team of pioneering neuroscientists who developed the now foundational split-brain brain theory: the notion that the right and left hemispheres of the brain can act independently from one another and have different strengths. In *Tales from Both Sides of the Brain*, Gazzaniga tells the

What's the actual secret to happiness? Great memories! Meik Wiking—happiness researcher and New York Times bestselling author of *The Little Book of Hygge* and *The Little Book of Lykke*—shows us how to create memories that make life sweet in this charming book. Do you remember your first kiss? The day you graduated? Your favorite vacation? Or the best meal you ever had? Memories are the cornerstones of our identity, shaping who we are, how we act, and how we feel. In his work as a happiness researcher, Meik Wiking has learned that people are happier if they hold a positive, nostalgic view of the past. But how do we make and keep the memories that bring us lasting joy? *The Art of Making Memories* examines how mental images are made, stored, and recalled in our brains, as well as the “art of letting go”—why we tend to forget certain moments to make room for deeper, more meaningful ones. Meik uses data, interviews, global surveys, and real-life experiments to explain the nuances of nostalgia and the different ways we form memories around our experiences and recall

Combining his signature charm with Scandinavian forthrightness, filled with infographics, illustrations, and photographs, and featuring “Happy Memory Tips,” *The Art of Making Memories* is an inspiration meditation and practical handbook filled with ideas to help us make the memories that will bring us joy throughout our lives.

Limitless

Is stress preventing you from enjoying your daily life? Do you find that you're becoming more distracted or forgetful? Are "the blues" sapping your spirits? Or do you simply feel not quite like yourself? If you want to reclaim you focus, memory, and joy, you're not alone. There are millions of people fighting against the epidemic of brain fog that's sweeping the nation. The good news: It's not an irreparable condition; rather it's a side effect of modern-day living. Many of the foods we eat and the habits we have do not support our brains. We no longer get what we need in order to produce essential brain chemicals that keep us energized, calm, focused, optimistic, and inspired. And even worse, our choices could lead to long-term problems, like dementia, Alzheimer's disease, depression, and anxiety. Sadly, if you look at the way most of us live, it seems almost as though we've chosen a lifestyle deliberately intended to undermine our brain chemistry and our health. Fortunately, there is a solution. The Brain
