Robot - Wikipedia

Godzilla (in Japanese: ゴジラ, Gojira) is the titular main protagonist of the Godzilla franchise, including the movie series, comics, cartoons, and video games, most often serving as an on-and-off villain. 1 Overview 2 Appearance 2.1 General Depiction 2.2 MonsterVerse Incarnation 2.3 Shin Godzilla 2.3.1 First Form 2.3.2 Second Form 2.3.3 Third Form 2.3.4 Fourth Form 2.3.5 Fifth Form 2.4

How Natural Selection Works | HowStuffWorks

Wohlleben sees a forest as a superorganism of unique individuals. A single beech tree can live for 400 years and produce 1.8 million beechnuts. "When a human breaks the branch with his hands

Human Microbiome Quiz | Science for Kids | Microbiology

BioTransformer is a software tool that predicts small molecule metabolism in mammals, their gut microbiota, as well as the soil/aquatic microbiota. Moreover, it can also assist scientists in the identification of metabolites, which is based on the metabolism prediction. BioTransformer uses both a knowledge-based approach and a machine learning based approach to predict small molecules metabolism.

10 Best Space Movies of All Time - Most Underrated Space Films

Individual microscopic cells begin life alone but eventually come to cooperate, fusing into a superorganism. Together, these brainless cells can commandeer the brain of a much larger creature.

Do Trees Talk to Each Other? | Science | Smithsonian Magazine

What Elements Are Found in the Human Body? There are 92 elements that occur naturally on Earth. For living things, only 11 of these elements are found in larger than trace quantities. Any amount 0.01% or less is considered a trace element. For vertebrates, such as humans, there are two additional elements that occur in larger than trace amounts these are Iodine and Iron.

Gravemind - Wikipedia

You are a superorganism because your body is an ecosystem. It is home to trillions of microbes that form communities in different places in and on your body. Together these communities make up your microbiome. Scientists estimate the human body is made of about 100 trillion bacterial cells. That's between 70 to 90 percent of all cells in

Godzilla | Villains Wiki | Fandom

The Gravemind is a parasitic, hive mind intelligence in the Halo universe. While only one Gravemind is ever seen in the games, the title is given to the final stage of Flood evolution, in which the Flood becomes a superorganism. The Flood is a highly-infectious parasite which is released several times during Halo 's story. The Chief and the Arbiter (The 'Vadam, during the course of Halo 2 and

Opinion | A.I. and I - The New York Times

In biology, homeostasis is the state of steady internal, physical, and chemical conditions maintained by living systems. This is the condition of optimal functioning for the organism and includes many variables, such as body temperature and fluid balance, being kept within certain pre-set limits (homeostatic range). Other variables include the pH of extracellular fluid, the concentrations of

BioTransformer

The other family doesn't -- they hunt separately, and each human only eats whatever he can catch. The cooperative group is more likely to achieve reproductive success, passing along the alleles for altruism. Biologists are also exploring a concept known as the superorganism. It's basically an organism made out of many smaller organisms.

Human Mendelian Traits | Ask A Biologist

In some cases, these connected devices require intentional human interaction. In other cases, the networks operate without human agents.

Ecological Economics - Journal - Elsevier

Bowerbirds aren't the only non-human artists. Congo was a male chimpanzee born in 1954 at London Zoo. When Congo was two years old, the British zoologist and artist Desmond Morris gave the chimp a

Chemical Elements of the Human Body | Ask A Biologist

Trait: a characteristic of an organism that can be the result of genes and/or influenced by the environment. Traits can be physical like hair color or the shape and size of a plant leaf. Traits can also be behaviors such as nest building behavior in birds.

Creativity: The weird and wonderful art of animals - BBC

The journal is concerned with extending and integrating the understanding of the interfaces and interplay between "nature's household" (ecosystems) and "humanity's household" (the economy). Ecological economics is an interdisciplinary field defined by a set of concrete problems or challenges related to governing economic activity in a way that promotes human well-being, sustainability, and justice.

Bing: The Human Superorganism How The

A robot is a machine—especially one programmable by a computer— capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed on the lines of human form, but most robots are machines designed to perform a task with no regard to their aesthetics.

The Human Superorganism How The

Interstellar is a divisive movie. Some people love it, others say it's too high-concept or drags on too. But frankly, Christopher's Nolan's flick is one of the best space epics of this century.
